

## Linked List Assignment

### Batch: Launchpad

1. Eliminate duplicates from a sorted linked list
2. Merge two sorted linked lists into one.
3. Find midpoint of a Linked List
4. Implement Bubble Sort, Selection Sort, Insertion Sort and Merge Sort using recursion.
5. Implement Bubble Sort, Selection Sort, Insertion Sort without using recursion.
6. Check if a linked list is a palindrome
7. Reverse Linked List
  - a. Using recursion
  - b. Without using recursion
8. Arrange elements in a Linked List such that all even numbers are placed after odd numbers.
9. Print a given linked list in reverse order. Tail first. You can't change any pointer in the linked list.
10. Append the last n elements of a linked list to the front.  
e.g. for  $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 5 \rightarrow 6 \rightarrow \text{null}$  and  $n = 2$  return  $5 \rightarrow 6 \rightarrow 1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow \text{null}$
11. Implement  $k\text{Reverse}(\text{int } k)$  i.e. you reverse first K elements then reverse next K elements and join the linked list and so on.  
 $3 \rightarrow 4 \rightarrow 5 \rightarrow 2 \rightarrow 6 \rightarrow 1 \rightarrow 9$  for  $k\text{reverse}(3)$  becomes  $5 \rightarrow 4 \rightarrow 3 \rightarrow 1 \rightarrow 6 \rightarrow 2 \rightarrow 9 \rightarrow 1$
12. Create your own Doubly Linked List Class and Implement following functions on Doubly Linked List
  - a. Insert Element at the end
  - b. Insert Element at the beginning
  - c. Print elements from start to end using head.

- d. Print elements from end to start using tail
- e. Find position of element with given data
- f. Delete Element at Position K
- g. Insert Element at Position K
- h. Sort the list using Merge Sort
- i. Delete element at end
- j. Delete element at beginning
